Abstracts

Air starter motors are devices used to start large diesel and gas turbine engines by delivering a high-torque output through compressed air. Unlike electric starter motors, air starters are powered by compressed air stored in tanks, making them ideal for environments where electrical power might be unreliable or hazardous, such as in oil and gas operations, marine vessels, and heavy industrial machinery. They are compact, lightweight, and capable of providing instant, powerful torque to initiate engine rotation, which is crucial for starting large engines. Additionally, air starter motors are valued for their durability, minimal maintenance requirements, and the ability to function in extreme conditions.

The global Air Starter Motors market size was estimated at USD 479.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
