Abstracts

An air supported belt conveyor is a specialized material handling system that utilizes a cushion of pressurized air to float the conveyor belt, reducing friction and enabling efficient, low-energy transport of bulk materials; unlike traditional idler-based conveyors that rely on multiple rollers, this system employs an enclosed plenum chamber that distributes air evenly beneath the belt, creating a near-frictionless air film that supports both the belt and the material load, making it particularly advantageous for long-distance, high-capacity applications where minimized power consumption, reduced maintenance, and gentle handling of materials are critical operational priorities.

The global Air Supported Belt Conveyors market size was estimated at USD 180.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
