Abstracts

Air supported structures, also known as air domes or pneumatic structures, are large, flexible enclosures maintained by continuous internal air pressure slightly higher than atmospheric pressure, utilizing a specialized fabric—typically PVC-coated polyester or ETFE—supported by a constant flow of air from industrial-grade fan systems. These structures are valued for their rapid deployment, cost-effectiveness compared to traditional construction, and versatility in applications such as sports facilities, warehousing, event venues, agricultural storage, and temporary emergency shelters. Key advantages include their clear-span interiors without internal supports, energy efficiency in climate control due to their insulating air layer, and adaptability to various sizes and environments. However, their operation depends on uninterrupted power for air pressure maintenance, and they require careful anchoring and periodic maintenance to ensure durability against environmental factors like wind, snow, and UV exposure.

The global Air Supported Structures market size was estimated at USD 420.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
