Abstracts

Air Textured Yarn (ATY) is a type of synthetic yarn produced through an air-jet texturing process, which imparts bulk, softness, and elasticity to continuous filament yarns?primarily polyester, nylon, or polypropylene?by subjecting them to high-pressure air streams that separate, loop, and entangle individual filaments, creating a yarn structure that mimics the aesthetic and tactile properties of spun yarns while retaining the strength and uniformity of filaments, making it particularly suitable for applications requiring durability, moisture-wicking, and a natural fiber-like appearance. The global ATY market is experiencing steady growth, driven by rising demand from the textile and apparel industry, particularly in sportswear, activewear, home textiles, and automotive interiors, where its properties such as lightness, elasticity, and aesthetic versatility are highly valued. Key market trends include increasing consumer preference for functional and performance-oriented fabrics, technological advancements in texturing machinery that enhance production efficiency and yarn quality, and a shift toward sustainable and recycled polyester ATY in response to growing environmental consciousness. Geographically, Asia-Pacific dominates the market, with China, India, and Vietnam as major production and consumption hubs due to their established textile manufacturing bases, cost-effective labor, and expanding export capacities, while North America and Europe show strong demand for premium and technical textile applications. The market is moderately consolidated, with leading players focusing on product innovation, capacity expansion, and strategic partnerships to strengthen their market position; however, competition remains intense due to the presence of numerous regional manufacturers and fluctuating raw material prices, which pose challenges to profitability. Future growth is expected to be fueled by advancements in smart and eco-friendly textiles, increasing investment in research and development for specialized ATY variants, and the rising adoption of ATY in non-apparel sectors such as medical textiles and geotextiles.
