Abstracts

Air traffic solutions refer to a series of technologies and systems used to manage and optimize aircraft activities in airspace to ensure the safe, efficient and orderly operation of air traffic. The solution includes aviation communications, navigation and surveillance systems (CNS), flight flow management, airspace management, and unmanned aerial vehicle traffic management (UTM) to support the safe operation of aircraft, drones and other aerial vehicles in different airspaces. Air traffic solutions are widely used in civil aviation, military, drone management, logistics and transportation industries, aiming to improve the efficiency of airspace use, reduce delays, reduce operating costs, and provide basic support for future urban air traffic (UAM).The development of air traffic solutions represents an important trend in the aviation industry towards intelligence, safety and efficiency. In the context of continued growth in aviation demand and limited airspace resources, these solutions not only improve operational efficiency in the air and on the ground, but also significantly reduce delays and congestion, optimize energy use, and reduce environmental impact. In addition, with the rise of drones and urban air mobility (UAM), air traffic solutions must continue to innovate to adapt to new airspace management needs and diverse aircraft types. In the future, air traffic management will continue to become more intelligent, and automated and data-driven decision-making systems will become the core, laying a solid foundation for the continued development of air traffic systems and wider airspace applications.

The global Air Traffic Solution market size was estimated at USD 12790.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.10% during the forecast period.
