## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Air Water Generator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An Air Water Generator is a device that extracts water directly from ambient air, using humidity in the atmosphere as its source. It is sometimes called an Atmospheric Water Generator (AWG). In 2024, global Air Water Generator production reached approximately 82 K units, with an average global market price of around US\$3900 per unit. The production capacity of Air Water Generator in 2024 is approximately 85 K units. The gross profit margin of Air Water Generator is between 20% and 30%. The Air Water Generator (AWG) industry chain consists of upstream suppliers of raw materials and key components, midstream manufacturers of AWG systems, and downstream distributors and end-users. Upstream includes suppliers of refrigeration compressors, heat exchangers, filters, desiccants, and electronic control components. Midstream companies design and assemble AWG units, integrating technologies such as atmospheric water condensation, purification, and storage. Downstream, distributors, dealers, and service providers supply AWG systems to households, commercial buildings, industrial sites, and remote areas lacking conventional water infrastructure. The industry chain is driven by technological innovation, energy efficiency improvements, and increasing demand for sustainable water solutions.

The global Air Water Generator market size was estimated at USD 320.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
