## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Airbag Sewing Threads competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Airbag Sewing Threads production reached approximately 202.3 kilotons, with an average global market price of around US\$ 305 per Ton. Airbag Sewing Threads are specialized sewing threads used specifically for sewing automotive airbags. They must possess high strength to withstand the tremendous tension generated during the instantaneous inflation and deployment of the airbag, preventing thread breakage and leakage, leading to airbag failure. They must also possess excellent heat resistance to maintain stable performance even in the high temperatures generated during airbag deployment. They must also exhibit excellent chemical resistance to withstand the various chemicals to which the airbag material may be exposed during production, storage, and use, ensuring that the thread securely secures the airbag components throughout the vehicle's lifespan. The upstream supply chain for airbag sewing threads places stringent demands on material manufacturers. DuPont is a global leader in aramid materials. Its aramid fibers offer exceptional strength and high-temperature resistance, meeting the strength requirements of airbag sewing threads under extreme conditions. Teijin, Japan, also boasts leading aramid technology and stable product performance. BASF, Germany, produces polyester raw materials with high purity and consistent quality, providing a strong foundation for sewing thread strength and abrasion resistance. Leading downstream customers are concentrated in the automotive industry. International automakers such as Volkswagen, Toyota, and General Motors all place extremely high demands on the quality, performance, and supply stability of airbag sewing threads, directly driving the continuous advancement of sewing thread technology. In China, domestic automakers such as BYD and Geely are rapidly

developing. While pursuing vehicle safety, they also prioritize the development of local supply chains. This provides a broad market opportunity for airbag sewing thread companies and fosters collaborative development between upstream and downstream players.

The global Airbag Sewing Threads market size was estimated at USD 61.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
