The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Airbag Woven Fabrics competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Airbag woven fabrics are high-performance woven textiles specifically designed for automotive airbag systems. They are typically made from high-tenacity synthetic fibers such as nylon 66 or polyester, and are produced using plain, twill, or other tightly woven constructions. These fabrics exhibit excellent mechanical properties including high tensile strength, tear resistance, dimensional stability, and heat resistance, allowing them to withstand rapid inflation and form protective structures in milliseconds. Depending on the application, they may be uncoated or coated with airtight materials such as silicone or polyurethane, and are widely used in driver airbags, passenger airbags, side airbags, curtain airbags, and other safety components.

The global Airbag Woven Fabrics market size was estimated at USD 1403.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
