Abstracts

An airborne laser weapon system is a directed-energy weapon platform mounted on an aircraft, designed to engage and destroy targets such as missiles, drones, or other aerial threats using a high-energy laser beam. These systems typically integrate advanced optics, precision tracking and targeting mechanisms, and power generation or storage subsystems to deliver focused laser energy at the speed of light, enabling rapid engagement of multiple targets with minimal collateral damage. The technology represents a shift from kinetic to energy-based defense mechanisms, offering advantages in cost-per-shot, scalability, and responsiveness, though it remains constrained by factors like atmospheric conditions, power requirements, and thermal management.

The global Airborne Laser Weapon System market size was estimated at USD 355.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
