Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Airbrush Compressor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of spray gun compressors reached 710,000 units, with an average selling price of US\$1,500 per unit. To address the pain points of manual spraying, such as unstable pressure, poor atomization, and low work efficiency, spray gun compressors were developed. As the core power source of spray gun systems, they generate stable pressure through compressed gas to drive the atomization and spraying of paint/media. They have evolved into various types, including piston, screw, and jet types, and are widely used as key equipment in automotive manufacturing, industrial coating, environmental cleaning, and military maintenance. In the 2024 global spray gun compressor market, the automotive sector accounted for 42% (\$452 million), while high-pressure products accounted for 32% (\$344 million). In terms of production capacity, leading spray gun compressor companies such as Pride have an annual production capacity of 50,000 units, while small and medium-sized enterprises typically have a single-line capacity of 20,000-30,000 units. The industry average capacity utilization rate is approximately 70%, which can rise to 85% during peak seasons. Gross profit margins vary depending on product positioning: civilian portable models are approximately 15%-18%, industrial high-pressure models are approximately 18%-25%, and military-customized models can reach over 30%. Typical Transaction Case: Tesla's Shanghai Gigafactory purchased 15,000 Ingersoll Rand screw-type paint compressors (model IR-375) in the second quarter of 2024, totaling approximately US\$22.5 million. The requirements were "pressure fluctuation ≤ 0.1 MPa, compatibility with electrostatic spray gun systems, and continuous operation failure rate
