Abstracts

Aircraft Crew Rest Modules (CRMs) are specialized, self-contained sleeping and resting compartments installed aboard long-haul commercial and cargo aircraft, designed to provide flight crew members with a private, comfortable, and ergonomic space to rest during extended flights. These modules are engineered to optimize limited cabin space, typically located above the main cabin or in converted cargo areas, and are equipped with features such as lie-flat beds, sound insulation, lighting controls, ventilation systems, and storage for personal items, ensuring compliance with aviation safety regulations and crew duty-time limitations. CRMs play a critical role in enhancing crew alertness, reducing fatigue, and maintaining operational safety on ultra-long-range routes, thereby supporting both regulatory requirements and airline efficiency.

The global Aircraft Crew Rest Modules market size was estimated at USD 142.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
