Abstracts

An aircraft de-icing pump is a critical ground support equipment component designed to deliver de-icing and anti-icing fluids at high pressure and controlled flow rates to aircraft surfaces, ensuring the safe and efficient removal or prevention of ice, snow, or frost accumulation prior to takeoff. These pumps are typically integrated into specialized de-icing trucks or stationary systems and must meet stringent aviation safety standards, as they handle fluids such as glycol-based Type I, II, III, or IV that lower the freezing point of water and provide holdover protection. Engineered for reliability in extreme weather conditions, they often feature corrosion-resistant materials, precise metering capabilities, and compatibility with various fluid viscosities to support rapid and thorough fluid application across diverse aircraft types, from regional jets to wide-body airliners.

The global Aircraft De Icing Pump market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.85% during the forecast period.
