Report Overview

Aircraft disassembly and remanufacturing involve the systematic deconstruction of retired or end-of-life aircraft, extracting valuable components, and reusing them in other planes or repurposing the materials. The process begins with the safe removal of hazardous substances followed by the dismantling of engines, avionics, landing gear, and other reusable parts. These components are inspected, repaired, or overhauled, and then sold as certified pre-owned parts, contributing to cost efficiency and sustainability in the aviation industry. The remaining airframe is usually broken down for scrap metal recycling. This process supports a circular economy by minimizing waste, maximizing resource recovery, and enabling the aviation industry to manage its environmental impact more effectively?.

The global Aircraft Disassembly and Remanufacturing market size was estimated at USD 5740 million in 2023 and is projected to reach USD 10117.15 million by 2032, exhibiting a CAGR of 6.50% during the forecast period.
