Abstracts

Aircraft disassembly and remanufacturing involve the systematic deconstruction of retired or end-of-life aircraft, extracting valuable components, and reusing them in other planes or repurposing the materials. The process begins with the safe removal of hazardous substances followed by the dismantling of engines, avionics, landing gear, and other reusable parts. These components are inspected, repaired, or overhauled, and then sold as certified pre-owned parts, contributing to cost efficiency and sustainability in the aviation industry. The remaining airframe is usually broken down for scrap metal recycling. This process supports a circular economy by minimizing waste, maximizing resource recovery, and enabling the aviation industry to manage its environmental impact more effectively. Generally speaking, an aircraft enters the retirement stage when it reaches 15 years old. The number of retired aircraft in the world is increasing year by year, and a large number of aircraft will be retired in the next 20 years. Boeing's report predicts that the world will need more than 44,040 new aircraft in the next 20 years, nearly half of which will be used to replace in-service aircraft. The Aircraft Recycling Association (AFRA) predicts that an average of more than 1,000 aircraft will be retired each year in the next 15 years. The COVID-19 pandemic has exacerbated this trend, causing the number of retired aircraft to increase to 1,500 to 2,600 each year. The disposal of retired aircraft assets is crucial to the operation and profitability of airlines, and how to maximize their value has become an important issue in the global aviation industry. The global aircraft dismantling and remanufacturing market is worth \$100 billion and is expected to grow at a compound annual growth rate of 6% to 7%. With the development of technology and the second-hand aircraft and aviation material market, the rate of scrapped parts has decreased, and the reuse rate has increased to more than 90%. The annual growth rate of the second-hand aviation material market is expected to reach 5.5%, and the market size will exceed \$10 billion in 2033. The aircraft dismantling industry has become relatively mature in developed

countries and regions such as Europe and the United States, and has developed into an aircraft dismantling and recycling industry. The aircraft dismantling industry has been booming in developed regions of Europe and America, the Middle East and even Southeast Asia. As a major aviation manufacturing country, the United States has more than 80% of the world's aircraft dismantling companies and business volume, with an annual output value of hundreds of billions of dollars; Africa is tending to become a gathering place for second-hand or even third-hand aircraft in the world, and some aircraft are converted into cargo planes in Africa. As an important part of the aviation manufacturing industry, aircraft dismantling and remanufacturing has become a natural extension of the aviation industry chain, and its development trend is very rapid.

The global Aircraft Disassembly and Remanufacturing market size was estimated at USD 6110.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
