Abstracts

Aircraft dismantling services involve the process of disassembling decommissioned or retired aircraft to recover and recycle valuable parts and materials while safely disposing of hazardous components. The service typically begins with the removal of reusable components, such as engines, avionics, landing gear, and other high-value parts, which are inspected, refurbished, and resold in the secondary aviation market. Following the removal of salvageable parts, the remaining structure is dismantled, with materials like aluminum, titanium, and composites being recycled. Specialized teams ensure compliance with environmental regulations and safety standards throughout the process. Aircraft dismantling is a key aspect of the aviation industry's commitment to sustainability and resource management, as it reduces waste and extends the lifecycle of valuable components. Generally speaking, an aircraft enters the retirement stage when it reaches 15 years old. The number of retired aircraft in the world is increasing year by year, and a large number of aircraft will be retired in the next 20 years. Boeing's report predicts that the world will need more than 44,040 new aircraft in the next 20 years, nearly half of which will be used to replace in-service aircraft. The Aircraft Recycling Association (AFRA) predicts that an average of more than 1,000 aircraft will be retired each year in the next 15 years. The COVID-19 pandemic has exacerbated this trend, causing the number of retired aircraft to increase to 1,500 to 2,600 each year. The disposal of retired aircraft assets is crucial to the operation and profitability of airlines, and how to maximize their value has become an important issue in the global aviation industry. The global aircraft dismantling and remanufacturing market is worth \$100 billion and is expected to grow at a compound annual growth rate of 6% to 7%. With the development of technology and the second-hand aircraft and aviation material market, the rate of scrapped parts has decreased, and the reuse rate has increased to more than 90%. The annual growth rate of the second-hand aviation material market is expected to reach 5.5%, and the market size will exceed \$10 billion in 2033. The aircraft

dismantling industry has become relatively mature in developed countries and regions such as Europe and the United States, and has developed into an aircraft dismantling and recycling industry. The aircraft dismantling industry has been booming in developed regions of Europe and America, the Middle East and even Southeast Asia. As a major aviation manufacturing country, the United States has more than 80% of the world's aircraft dismantling companies and business volume, with an annual output value of hundreds of billions of dollars; Africa is tending to become a gathering place for second-hand or even third-hand aircraft in the world, and some aircraft are converted into cargo planes in Africa. As an important part of the aviation manufacturing industry, aircraft dismantling and remanufacturing has become a natural extension of the aviation industry chain, and its development trend is very rapid.

The global Aircraft Dismantling Services market size was estimated at USD 6110.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
