Abstracts

Aircraft door cabin sealants are specialized high-performance materials designed to provide airtight and watertight seals around aircraft door frames, ensuring cabin pressurization, thermal insulation, and resistance to environmental factors such as extreme temperatures, humidity, and aviation fluids. These sealants must meet stringent aviation safety and performance standards, including durability under cyclic pressurization, flame resistance, and compatibility with aircraft structural materials like aluminum and composites. Typically formulated from polysulfide, silicone, or polyurethane bases, they are applied during manufacturing, maintenance, or repair operations to prevent air leakage, reduce noise, and enhance passenger comfort and safety.

The global Aircraft Door Cabin Sealants market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
