Report Overview

Composite materials are comprised of at least two parts: the reinforcement, which provides special mechanical properties such as stiffness or strength, and the matrix material, which holds everything together. Ceramic matrix composites (CMCs) are a special type of composite material in which both the reinforcement (refractory fibers) and matrix material are ceramics. In some cases the same kind of ceramic is used for both parts of the structure, and additional secondary fibers may also be included. Because of this, CMCs are considered a subgroup of both composite materials and ceramics.

In North America, Europe and Asia-Pacific markets, the core manufacturers of Aircraft Engine Ceramic Matrix Composite (CMC) include GE Aviation, Safran and Rolls-Royce Group etc.
