Report Overview

A fastener is a hardware device that mechanically joins or affixes two or more objects together. In general, fasteners are used to create non-permanent joints; that is, joints that can be removed or dismantled without damaging the joining components. Welding is an example of creating permanent joints. Coating material for fasteners is largely dependent on their materials and applications where it is used. Cadmium coating is likely to remain the most dominant segment of the aircraft fastener coatings market over the next five years
