Report Overview

Fire protection systems (FPS) are one of the most essential requirements on board aircraft. The impact of fire breakouts can be significantly reduced using Smoke detection and fire Suppression systems as evacuation during flight is impossible. Smoke detectors are usually installed in cabin, crew rest compartments, lavatories, galley complexes, purser work stations, business centers, and video control centers. A dedicated smoke detection system, in some cases, is not installed in the main cabin as cabin crew and passengers can perceive smoke in such areas.

The global Aircraft Fire Protection Systems market size was estimated at USD 827.10 million in 2023 and is projected to reach USD 1060.46 million by 2032, exhibiting a CAGR of 2.80% during the forecast period.
