Report Overview:

Fly-by-wire (FBW) is a system that replaces the conventional manual flight controls of an aircraft with an electronic interface. The movements of flight controls are converted to electronic signals transmitted by wires (hence the fly-by-wire term), and flight control computers determine how to move the actuators at each control surface to provide the ordered response. It can use mechanical flight control backup systems (Boeing 777) or use fully fly-by-wire controls.

The Global Aircraft Fly-by-wire System Market Size was estimated at USD 4931.40 million in 2023 and is projected to reach USD 7400.71 million by 2029, exhibiting a CAGR of 7.00% during the forecast period.
