Report Overview

An aircraft health monitoring system (AHMS) is a software and hardware setup that includes sensors and networked processing units. It remotely monitors airplane data to evaluate its current or future serviceability and performance. These systems are also referred to as aircraft condition monitoring systems (ACMS). AHMS directly impacts the maintenance, repair, and overhaul (MRO) segment of the airline industry. Their use reduces maintenance and operational costs while enhancing aircraft safety. The rising importance of data analytics in the aviation industry is fueling the demand for convenient AHMS software. These software solutions also use AI and ML algorithms to process vast amounts of data gathered from aircraft sensors. Moreover, they can identify anomalies, patterns, and potential issues regarding predictive maintenance and early fault detection.
