Abstracts

Aircraft Landing and Taxiing Lights are important components of the aircraft's external lighting system, used to ensure safe operation of the aircraft in low visibility conditions. Landing lights are installed on the leading edge of the wing or under the fuselage to provide strong illumination to help pilots see the runway when landing. Taxi lights are usually located on the front landing gear or the nose of the aircraft to illuminate the path ahead when the aircraft is taxiing on the ground to avoid collisions with other aircraft or ground equipment. These lights need to have high brightness, durability and impact resistance to withstand extreme weather conditions and frequent use.

The global Aircraft Landing And Taxiing Lights market size was estimated at USD 816.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
