Report Overview

The aircraft leasing market involves the leasing of commercial aircraft to airlines and other operators, providing an alternative to direct ownership. Lessors, including major firms like AerCap and Air Lease Corporation, purchase aircraft from manufacturers such as Boeing and Airbus and lease them to airlines under operating or finance leases, typically for 5-12 years. This model allows airlines to expand or renew fleets without heavy upfront capital expenditures, mitigating financial risk while maintaining operational flexibility. The market is driven by factors such as rising global air travel demand, airline fleet modernization, and the financial constraints of carriers, particularly in emerging markets. Key segments include narrow-body and wide-body aircraft leasing, with narrow-body aircraft (e.g., Airbus A320neo and Boeing 737 MAX) dominating due to their operational efficiency and high demand for short-to-medium-haul routes. The industry is highly competitive, with lessors differentiating through financing terms, aircraft selection, and customer service. Regulatory oversight, interest rate fluctuations, and aircraft residual values significantly impact profitability. Emerging trends include the growing adoption of sale-leaseback transactions, sustainability-driven demand for fuel-efficient aircraft, and digitalization in lease management. The market is expected to grow steadily, supported by post-pandemic travel recovery and increasing airline reliance on leasing to optimize balance sheets.

The global Aircraft Leasing market size was estimated at USD 21273.38 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.25% during the forecast period.
