Abstracts

The aircraft ignition system is used for creating & supplying electrical spark that ignites the mixture of air & fuel in the aircraft engine's cylinder. Ignition systems are of two types: magneto-ignition systems and electronic full authority digital engine control (FADEC) systems. The magneto ignition system is an ignition system where magneto is used for the generation of electricity. Modern aircrafts use dual ignition systems. Dual ignition system has increased safety. For instance, the aircraft system can be operated on other system in case of failing of one magneto system, until the aircraft lands safely. Additionally, the use of dual ignition system has also improved combustion of air & fuel mixture, which has resulted in increased efficiency of the aircraft's engine. According to the IATA, the total volume of air passenger traffic in 2022 increased by 64.4% compared to 2021. Global passenger traffic for the whole year was 68.5% of pre-pandemic (2019) levels. Total global aviation revenue grew by 43.6% to \$727 billion in 2022. In 2022, global airlines were expected to have a net loss of \$6.9 billion, significantly better than the net loss of \$42 billion in 2021 and \$137.7 billion in 2020. According to data from the Civil Aviation Administration of China, in 2022, the cumulative operating income of the entire industry was 632.89 billion yuan, down 15.8% from the previous year. The loss was 217.44 billion yuan. Among them, airlines achieved operating income of 336.48 billion yuan, and the loss was 177.12 billion yuan. The airport achieved operating income of 77.01 billion yuan and the loss was 47.62 billion yuan.

The global Aircraft Magneto Ignition System market size was estimated at USD 64.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
