Report Overview

Aircraft passenger service units are basically an aircraft component that are situated in the aircrafts above the seat of the passenger. Aircraft passenger service units comprised of an attendant call interface, warning signs to advise the passenger during flight, passenger airflow out, provision for speaker, a LED reading light, filler panels to adjust the passenger service unit configuration etc. A control unit is also available in the units to manage the interface with the cabin management system and other electronic sub-assemblies (reading light, button) can be directly plugged on the board. Passenger service units offers the modern-style components and sleek design which assists the aircraft design. Aircraft passenger service units are primarily designed for passenger aircraft cabin. Deployment of proper aircraft passenger service units is primarily dependent upon the effective configuration of the seats.
