Report Overview

An Aircraft turbocharger has a provision of compressor in order to augment aerial force into an engine, so as to provide more energy and increase its work efficiency for its propulsion. The aircraft turbocharger is basically placed in a circular case that includes a turbine which is connected to a shaft. When aircraft turbocharger is initiated, the turbine converts its exhaust energy to kinetic energy and supplies it to impeller wheel. This in turn results in a big mass of air and entering into the cylinders of the aircraft with each and every intake stroke in order to achieve improved speed of the engine.
