Report Overview

A turboprop is a type of gas turbine engine commonly used in aircraft. The driving principle of the turboprop engine is roughly the same as that of the traditional propeller aircraft using the piston engine as the power source. The main difference between it and the piston propeller is that in addition to the different power sources driving the central shaft of the propeller, the gas turbine of the turboprop engine usually runs at a constant speed, while the piston-powered propeller will follow the engine speed. Different and there are changes in the speed of high and low.
