Abstracts

Airlaid paper is a textile-like material categorized as a nonwoven fabric made from fluff pulp. Compared with normal wet-laid paper and tissue, air-laid paper is very bulky, porous and soft. It has good water absorption properties and is much stronger compared with normal tissue. The report mainly focus on airlaid paper used in wet wipes. Wipes offer a convenient solution for people leading fast-paced lifestyles. Products like baby wipes, makeup removal wipes, and personal hygiene wipes are designed for quick, effective use without needing water or additional cleaning products. The COVID-19 pandemic significantly increased global awareness about hygiene and sanitation. The demand for disinfectant wipes, hand sanitizing wipes, and surface cleaning wipes surged, a trend expected to continue in the post-pandemic era. Consumers are now more conscious of maintaining cleanliness at home, in public spaces, and on the go. Industrial wipes cater to various industries such as automotive, healthcare, food processing, manufacturing, and cleaning services. These wipes are designed to handle more demanding tasks and offer higher durability, absorbency, and specialized cleaning properties compared to consumer wipes. Industries such as food processing, healthcare, and pharmaceuticals are governed by stringent hygiene and safety standards, driving demand for wipes that meet regulatory requirements (e.g., FDA, EPA, or OSHA standards). Industrial wipes for cleaning surfaces, equipment, and hands are essential to maintaining cleanliness and preventing contamination. Fast increasing demand of wet wipes will promote the airlaid paper to grow accordingly.

The global Airlaid Paper for Wet Wipes market size was estimated at USD 285.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
