Abstracts

Airless Painting System works by drawing paint at a high pressure, up to 3,000 psi, through a hose and out a tiny gap in the spray gun tip. The tip is designed to separate the paint equitably into a fan-molded spray pattern of little droplets. Airless spraying is the fastest and most versatile way to achieve professional painting results and spray the widest variety of materials, unthinned. In fact, using an airless sprayer is up to 10 times faster than using a brush, and at least four times as fast as a roller!

The global Airless Painting System market size was estimated at USD 1461.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
