Abstracts

An airless static eliminator is a specialized device designed to neutralize static electricity on surfaces without the use of compressed air or ionizing blowers, employing methods such as passive or active static dissipation bars, brushes, or conductive materials that rely on direct contact or proximity to dissipate electrostatic charges, making them particularly valuable in environments where air movement is undesirable, such as cleanrooms, printing facilities, electronics manufacturing, or medical device production, where they prevent issues like dust attraction, product misalignment, or electrostatic discharge (ESD) damage to sensitive components.

The global Airless Static Eliminator market size was estimated at USD 125.3 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
