### Report Overview

The airliner turboprop engine is a type of gas turbine engine used as a power source for propeller-driven aircraft used in the airline industry. Unlike a turbojet engine that uses a fan to compress air and uses the jet exhaust for propulsion, a turboprop engine uses a gas turbine to drive a gearbox that powers a propeller to move the aircraft. The turboprop offers better fuel efficiency than a turbojet engine, making it ideal for short- to medium-range flights where speed is not critical.
