Abstracts

The Airport Departure Control System (ADCS) is a crucial information management and control system at airports. It mainly focuses on managing and coordinating the departure process of flights. The system provides real - time data and analytics, enabling airport managers to make informed decisions quickly. With accurate and timely information, passengers can have a better understanding of their flight status and the check - in process. By automating and streamlining various processes, it reduces manual errors and speeds up the overall departure process. This leads to fewer flight delays and more efficient use of airport resources.

Functions:

- Flight Scheduling and Monitoring:** It is responsible for handling flight schedules, including setting departure times, gate assignments, and coordinating with various airport departments to ensure that all preparations are completed on time. It continuously monitors the status of flights, such as any delays or changes in departure times, and promptly updates the relevant information.
- Passenger Check - in Management:** The system manages the passenger check - in process, including handling reservation information, issuing boarding passes, and checking passenger luggage. It verifies the identity and ticket information of passengers to ensure a smooth check - in process.
- Baggage Handling Coordination:** It coordinates with the baggage handling system to ensure that passengers' luggage is properly loaded onto the correct flight. It tracks the movement of baggage from the check - in counter to the aircraft hold, ensuring that the right bags are on the right plane and that there are no errors or losses.
- Resource Allocation:** It allocates airport resources such as gates, boarding bridges, and ground handling equipment. It optimizes the use of these resources to improve airport operational efficiency and ensure that each flight has the necessary resources for departure.
- Communication and Coordination:** The system serves as a communication hub, facilitating information exchange among different airport departments, such as the operations department, air traffic control, ground handling teams, and airline staff. This ensures that everyone is informed and

can work together seamlessly to ensure the smooth departure of flights.
