Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Airport FOD Detection System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. By 2024, the production capacity of airport FOD detection equipment will reach 1.25 million units. In 2024, global airport FOD detection system production reached approximately 960,000 units, with an average global market price of around US\$50,000 per unit. Airport runway foreign object (FOD) detection equipment is specialized technology used for real-time detection, location, and early warning of inanimate objects within the runway area that could pose a threat to aircraft operations. These devices primarily utilize millimeter-wave radar, electro-optical sensors, or a combination of multiple technologies (such as radar and video) to achieve automated, 24/7 monitoring of runway FOD, significantly improving airport safety and reducing the risk of aviation accidents caused by FOD. The FOD detection equipment industry chain encompasses technology R&D, component manufacturing, system integration, sales and deployment, and operational services. The upstream sector primarily involves core technology R&D and key component suppliers, including millimeter-wave radar modules (such as those in the 76-77GHz and 92-94GHz frequency bands), optical sensors (visible light and infrared cameras), LiDAR, and artificial intelligence algorithm chips and software. The midstream sector comprises system integrators and complete system manufacturers, who integrate upstream components and technologies into complete, deployable FOD detection systems and provide sales, installation, and commissioning. The downstream sector encompasses end users and application services, primarily at civil and military airports. The downstream link not only involves equipment procurement, but also involves ongoing operational maintenance, data analysis and professional services.

The global Airport FOD Detection System market size was estimated at USD 48231.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.20% during the forecast period.
