Report Overview

Cystic fibrosis is a hereditary disease that affects the lungs and digestive system. The body produces thick and sticky mucus that can clog the lungs and obstruct the pancreas. CF is serious, with potentially life-threatening consequences. The most common cause of death in people with CF is respiratory failure. Airway clearance techniques (ACTs) loosen thick, sticky mucus so it can be cleared from the lungs by coughing or huffing. Clearing the airways may help decrease lung infections and improve lung function.
