## Abstracts

AKD surface sizing agent, full - name Alkyl Ketene Dimer surface sizing agent, is a key chemical in the paper - making industry. It's usually in the form of a white emulsion, produced by synthesizing AKD from long - chain fatty acids and then emulsifying it. When applied to the paper surface, the active groups of AKD react with the hydroxyl groups of paper fibers during the drying process, forming a hydrophobic film. This enhances the paper's water - resistance and printability. It allows for neutral sizing, reducing fiber corrosion and equipment damage compared to acidic sizing agents. A curing period is needed to fully develop its sizing effect.

The global AKD Surface Sizing Agent market size was estimated at USD 352.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
