Abstracts

Alanine based surfactants are a class of mild, biodegradable surfactants derived from the amino acid alanine, typically synthesized through the condensation of fatty acids from natural sources (such as coconut or palm kernel oil) with sodium N-lauroyl sarcosinate or related compounds, resulting in anionic surfactants known for their high foaming capacity, skin and eye mildness, stability across a wide pH range, and excellent compatibility with other ingredients. These characteristics make them particularly suitable for personal care and cosmetic formulations, including shampoos, body washes, facial cleansers, and toothpaste, where gentleness and environmental sustainability are prioritized, while also finding niche applications in household and industrial cleaners requiring biodegradable and low-irritancy profiles.
