Report Overview

Algal protein expression is the way in which proteins are produced, modified and controlled in living organisms. Algal protein is synthesized and regulated, depending upon the functional needs in the host cells. Besides, there are various types of algal protein expression systems such as Chlamydomonas and Synechococcus protein expression. Among, Chlamydomonas which is a green alga, has gained attention for the production of therapeutic proteins and vaccines. Further, Synechococcus, which is a blue-green alga, are the basis for the production of bioproduction of alcohol and chemicals. This, in turn, is expected to increase the demand for the algal protein expression system.
