Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Alginate Impression Materials competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Alginate is one of the commonly used dental material. Alginate impression materials are used to capture a range of dental impressions because when properly used they provide highly detailed impressions. However, because the material does not often provide lasting dimensional stability, alginate impressions must be used to create a model or temporary restoration quickly after the impression is captured. Alginates are packaged in a powdered form and must be mixed before an impression is captured. This makes the product economical and easy to store in a practice. Different alginates offering different working times and other physical properties, so it is important to find a material that is both comfortable to work with and capable of capturing the details required for high-quality dental work. In 2024, global Alginate Impression Materials sales reached approximately 80,550 k units , with an average global market price of around US\$ 4.93 per unit. Global key manufacturers of alginate impression materials include Dentsply Sirona, GC Corporation, Septodont, and others. The top three producers together hold more than 50% of the market share, with the largest producer being Dentsply Sirona at 30%. The global origins are mainly located in North America, Europe, China and Japan. In terms of applications, dental clinics are the top application area with a market share of 46%, followed by hospitals with a 37% share.
