Report Overview

Alinia (nitazoxanide) is an antiparasitic and antiviral medication primarily used to treat infections caused by protozoa and helminths, including *Giardia lamblia* and *Cryptosporidium parvum*, as well as certain viral infections like rotavirus and influenza. The drug works by interfering with the energy metabolism of parasites and inhibiting viral replication, making it effective against a range of pathogens. Market demand for Alinia is driven by its broad-spectrum activity, particularly in regions with high prevalence of parasitic infections, such as developing countries with limited access to clean water and proper sanitation. The growing awareness of neglected tropical diseases and increasing healthcare investments in endemic regions contribute to its market expansion. Additionally, off-label use in viral infections and potential applications in emerging infectious diseases further enhance its commercial prospects. Competition from generic alternatives and the need for improved formulations to enhance bioavailability present both challenges and opportunities for market growth. Regulatory approvals, pricing strategies, and partnerships with global health organizations play a critical role in shaping Alinia's market dynamics.

The global Alinia (nitazoxanide) market size was estimated at USD 198.18 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
