Abstracts

Aliphatic polyester polyols are a specific class of polyols characterized by their polyester backbone derived from aliphatic diacids (such as adipic acid) and diols (such as 1,4-butanediol or ethylene glycol), resulting in polymers with saturated hydrocarbon chains that offer enhanced resistance to oxidation, UV degradation, and hydrolysis compared to aromatic counterparts. These materials serve as crucial building blocks in the production of high-performance polyurethanes, where they contribute to properties like flexibility, durability, weatherability, and chemical resistance in end products such as coatings, adhesives, sealants, elastomers (CASE), and foams, particularly in applications demanding long-term aesthetic and functional stability outdoors or in harsh environments. The market for aliphatic polyester polyols is driven by demand from industries including automotive, construction, textiles, and furniture, where performance specifications require materials that maintain integrity under exposure to sunlight, moisture, and temperature fluctuations, with ongoing innovation focused on bio-based and sustainable variants to align with environmental regulations and consumer preferences.

The global Aliphatic Polyester Polyols market size was estimated at USD 2800.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
