Abstracts

Aliphatic polyketones are a relatively new class of polymers with many attractive and unique properties. The two most common aliphatic ketones are poly(ethylene ketone) and copolymers of ethylene and propylene ketone. Both polymers have high tensile and impact strength, exceptionally high abrasion resistance and excellent tribological properties. Other interesting properties include excellent hydrolysis resistance, very low water absorption, high barrier properties against fuel and oxygen, and outstanding chemical resistance. At present, the main manufacturer of aliphatic polyketone POK in the world is the Korean Hyosung Group, which has been developing and commercializing POK since 2004 and has successfully obtained patents related to raw material technology. As of now, the production of POK in the world is still mainly dominated by the Korean Hyosung Group. Although POK has excellent properties such as high strength, wear resistance, and chemical corrosion resistance, its market demand is relatively small due to its high production threshold, high technical difficulty, and relatively low market awareness. However, with the rapid development of the engineering plastics industry and the growing demand for new materials, the market potential of POK is gradually emerging.

The global Aliphatic Polyketone market size was estimated at USD 129.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.70% during the forecast period.
