The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Alkali-halide Scintillation Crystals competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Alkali-halide scintillation crystals are a class of inorganic scintillators composed of alkali metals combined with halogen elements, such as sodium iodide (NaI) and cesium iodide (CsI). These crystals are widely used in radiation detection because they efficiently convert ionizing radiation into visible light. When exposed to gamma rays or X-rays, they emit scintillation light, which can be detected and converted into electrical signals for further analysis. Alkali-halide scintillation crystals are favored for their high light output, fast response time, and good energy resolution, making them suitable for medical imaging, nuclear physics, and security applications.

The global Alkali-halide Scintillation Crystals market size was estimated at USD 148.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
