Abstracts

Alkali lead silicate glass is a specialized type of glass characterized by its composition, which includes significant amounts of alkali metal oxides (such as sodium or potassium oxide) and lead oxide, combined with silica as the primary glass-forming component. This formulation imparts unique properties, including a high refractive index, excellent electrical insulation, relatively low softening temperature, and enhanced radiation shielding capabilities, making it distinct from common soda-lime or borosilicate glasses. Its applications are highly specialized, often utilized in radiation protection windows, optical components like lenses and prisms requiring high light dispersion, electronic encapsulants, and sealing glasses in hermetic assemblies, where its specific physical and chemical attributes provide critical functional advantages over alternative materials.

The global Alkali Lead Silicate Glass market size was estimated at USD 1240.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
