Alkali polishing additive is a chemical agent used in the metal surface treatment industry, specifically designed for electrochemical or chemical polishing processes to enhance surface smoothness, brightness, and corrosion resistance by selectively dissolving microscopic surface irregularities in an alkaline environment. It typically contains alkaline compounds, complexing agents, surfactants, and inhibitors that work synergistically to achieve uniform material removal, reduce surface roughness, and produce a reflective finish on metals such as aluminum, stainless steel, and copper alloys without the use of highly acidic formulations, making it a safer and more environmentally favorable alternative in many industrial applications.

The global Alkali Polishing Additive market size was estimated at USD 135.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.25% during the forecast period.
