Abstracts

Alkali Resistance Brick is a kind of low alumina brick, the Al_2O_3 content is 30-25%, the main material is low alumina refractory clay, it is a kind of silica-alumina series refractory products with good alkali erosion resistance performance in cement kiln system. Alkali-resistant brick is a special type of refractory brick, which has good alkali corrosion resistance and can be used stably for a long time in an alkaline environment. This makes alkali-resistant bricks very important in some specific industrial and chemical applications. Alkali-resistant bricks are mainly used in some special chemical and industrial applications, such as alkaline electrolyzers, ammonia-alkali plants, alkaline kilns, cement kilns, etc. Similar to other refractory bricks, alkali-resistant bricks also show good stability in high-temperature environments and can withstand use under high-temperature conditions.
