The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Alkali Resistant Glass Fiber Textile Yarn competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Alkali-resistant glass fiber textile yarn is a continuous fiber yarn made of high alkali-resistant glass raw materials through high-temperature melting, drawing and surface impregnation. It introduces zirconium oxide into the fiber to significantly improve its resistance to strong alkaline environments such as cement. At the same time, it is coated with a special textile-type wetting agent and coupling agent during the drawing process to ensure that the yarn has excellent bonding and processing properties with the matrix material during subsequent weaving or compounding. Alkali-resistant glass fiber textile yarn has extremely high tensile strength and elastic modulus, low elongation, good thermal and wet stability, and excellent crack resistance and impermeability.

The global Alkali Resistant Glass Fiber Textile Yarn market size was estimated at USD 309.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
