Abstracts

Alkali soluble polyester is a specialized type of polyester resin designed to dissolve or disperse in alkaline aqueous solutions, typically through the incorporation of acid functional groups such as phthalic or terephthalic acid modified with sulfonate or carboxylate moieties that render the polymer water-dispersible under basic conditions. This solubility profile enables its primary application as a temporary binder or film-forming agent in industries such as textiles, coatings, and adhesives, where it facilitates processes like dye migration control, fiber sizing, or the development of water-based formulations that require subsequent removal or chemical resistance alteration via alkaline washing or neutralization.

The global Alkali Soluble Polyester market size was estimated at USD 1420.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
