Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Alkaline Electrolytic Water Hydrogen Production Separator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The alkaline electrolytic water hydrogen production separator is a key component used in the alkaline water electrolysis hydrogen production process. During the electrolysis process of an alkaline electrolyzer, the anode produces oxygen and the cathode produces hydrogen. The main function of the separator is to prevent the mixing of hydrogen and oxygen. The alkaline electrolytic water hydrogen production separator has the following characteristics: Isolation of hydrogen and oxygen molecules, resistance to corrosion from high-concentration alkali liquid, good mechanical strength, possibly high diaphragm porosity, maintaining chemical stability, easy access to raw materials, non-toxic, and non-toxic pollution-free, waste is easy to dispose of, and it is widely used in the field of hydrogen energy. In terms of production regions, China, Japan and Europe have become the main manufacturing regions for Alkaline Electrolytic Water Hydrogen Production Separator in the world. Among them, the Belgian company Agfa-Gevaert Group occupies a dominant position in the global major composite separator market, while Japan's Toray Industries plays a key role in the PPS separator market. It is worth mentioning that Chinese companies have gradually achieved mass production of composite separators, showing their growth potential in the industry. In terms of electrolyzer technology in various regions, China is dominated by alkaline electrolyzers, while the United States mainly uses PEM electrolyzers. Europe, Japan, South Korea and other regions use both alkaline electrolyzers and PEM electrolyzers. Therefore, the consumption regions of Alkaline Electrolytic Water Hydrogen Production Separator are mainly Asia-Pacific and

Europe, with sales in the Asia-Pacific region accounting for 70.22% of the world's sales in 2024, Europe accounts for 28.01%. From the perspective of products, PPS separators are second-generation products, and composite separators are third-generation separators. Composite separators are mainly used in developed regions such as Europe, Americas, Japan, and South Korea, and PPS separators are mainly used in China. From 2020 to 2023, PPS diaphragms have been dominant, especially in the Chinese market. However, after 2024, China's composite diaphragms will achieve mass production. It is expected that by 2031, composite diaphragms will replace PPS diaphragms and become the industry's leading product.

The global Alkaline Electrolytic Water Hydrogen Production Separator market size was estimated at USD 83.6 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 51.10% during the forecast period.
