## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Alkyl Chloride competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Alkyl Chloride production reached approximately 980 kilotons, with an average global market price of around US\$ 3,480 per ton. Alkyl Chloride is a class of organic compounds in which one or more hydrogen atoms of an alkane are replaced by chlorine atoms, resulting in molecules with the general formula  $R_nCl$ , where R represents an alkyl group. These compounds are also called chloroalkanes and can range from simple structures like methyl chloride ( $CH_3Cl$ ) to more complex long-chain chlorinated hydrocarbons. Alkyl chlorides are typically colorless, volatile liquids or gases with varying reactivity depending on the degree of substitution (primary, secondary, or tertiary carbon attachment to the chlorine atom). They are widely used as intermediates in organic synthesis, solvents, refrigerants, and precursors for producing other chemicals such as plastics, pharmaceuticals, and agrochemicals.

The global Alkyl Chloride market size was estimated at USD 3410.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
