Abstracts

Alkyl dimethyl betaine is a class of amphoteric surfactants derived from natural or synthetic fatty acids, typically featuring alkyl chain lengths ranging from C12 to C18, and is chemically characterized by the presence of both quaternary ammonium and carboxylate groups, which impart excellent foaming, thickening, and conditioning properties while maintaining mildness and compatibility with other surfactants; it is widely utilized across personal care, home care, and industrial applications?most notably in shampoos, body washes, hand soaps, and detergents?due to its ability to enhance viscosity, stabilize foam, reduce irritation from anionic surfactants, and function effectively across a broad pH range.

The global Alkyl Dimethyl Betaine market size was estimated at USD 1020.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
